# Cashless payment system

The currenza clip cashless payment system provides secure, encrypted data transfer via the MIFARE technology; multiple settings options provide a bespoke system, which will increase your machine revenues.

## Reliability:

- High security via encrypted Mifare data transmission
- Vandalism-protected reader inside of the vending machine
- Collection of transaction data for high data security
- All serial interfaces available – ideal for retro fitting on to mixed machine park
- Fast and easy to install.

## Profitability:

- Modular design – easy replacement of components
- Contactless MIFARE technology (13,56 MHz) for max. security
- Open for third party applications (door entry etc.) – ideal for retro fitting
- Powerful administration & service software clipManager for data management, key and reader configuration as well as audit data management according to EVA-DTS
- currenza clip RF – a compact USB desktop reader to interface with office PC

## Functions:

- Increase in revenues via flexible range of setting options. Create a bespoke solution for your cashless sites
- Discount, subventions, bonus, free vend, happy hour and many more
- Mifare clip cards and keys also support third party systems e.g. access, time and copy control or cash tills
- Easy config wizard option for easy and fast „out of box“ install

## Advantages of the cashless payment via currenza clip

- Different prices for cashless & cash supporting subsidised cashless sales
- Cash in advance – money is loaded to system before vend happens
- Less cash recycling costs
